Building a wise cracking computer

Putting his AI abilities to good use, Russian Igor Suslov, a physicist at the Kapitza Institute for Physical Problems in Moscow, is trying to create a computer based program that has a sense of humor. [According to the Telegraph](#) , Suslov "thinks he sees at least the broad outline of how humour works" based on "his mathematical model, which traces our ability to experience humour to quirks in how the brain handles information". In an interview with New Scientist, Suslov says humor's "... biological function, is to make brain operations more efficient." hmmm... there has to be a joke in this somewhere!
